

# Air Solar Outdoor Photography Tutorial

How to take a good solar photo?

Try to make it as detailed as possible. If no spots are visible, zoom on the solar disk edge and aim to make it as sharp as possible. Solar filter aside, there are few accessories you may want to consider when taking photos of the Sun. While not necessary, a tripod will improve the quality of your solar photography.

Is solar photography a good idea?

Solar photography is a very interesting, easy and affordable experience. A cheap white light filter on a superzoom bridge camera is all you need to peak into the sun's secrets. The greatest thing about solar photography is that the Sun is up there during the daytime hours.

Do you need a tripod for solar photography?

Solar filter aside, there are few accessories you may want to consider when taking photos of the Sun. While not necessary, a tripod will improve the quality of your solar photography. With medium telephoto lenses, you can get a good 'casual' shoot of the Sun handheld. But with longer lenses or when shooting for image stacking, the tripod is a must.

Do you need a filter for white light solar photography?

For white light solar photography, you only need a classic solar filter placed in front of a normal lens or telescope. The cheapest white light filters are made of a special film (Mylar) mounted on a rigid support. Glass filters are also available, but they are pricey. You should consider starting with mounted foil filters.

What equipment do you need to shoot a sun telephoto camera?

With medium telephoto lenses, you can get a good 'casual' shoot of the Sun handheld. But with longer lenses or when shooting for image stacking, the tripod is a must. An intervalometer is also a good thing, as it automatically captures a series of images. This accessory is great for capturing multiple images to be stacked later.

What is sun photography?

Photography is all about light, and that light is often sunlight. Even at night, when you photograph the Moon and the planets, you are working with sunlight. But have you ever tried to take pictures of the Sun itself? This article will introduce you to the many wonders of sun photography in an easy way and on a budget.
