

Environmental protection requirements for new energy batteries

What are battery safety requirements?

These include performance and durability requirements for industrial batteries, electric vehicle (EV) batteries, and light means of transport (LMT) batteries; safety standards for stationary battery energy storage systems (SBESS); and information requirements on SOH and expected lifetime.

How does the new battery regulation affect the environment?

The regulation imposes strict sustainability requirements on battery manufacturing and recycling to reduce the environmental impact of battery production. The key changes include: Carbon footprint reporting: Starting in 2025, manufacturers of EV, LMT, and industrial batteries must report the carbon footprint of their products.

What is a battery regulation?

Scope The regulation applies to all batteries, including all: batteries for light means of transport (LMT) such as electric bikes, e-mopeds and e-scooters. Targets It sets out rules covering the entire life cycle of batteries.

When will a new battery regulation be enacted?

As part of the EU Green Deal and building on the Strategic Action Plan on Batteries, the European Commission proposed in 2020 a new regulation on batteries and waste batteries, enacted on 12 July 2023, and in force August 2023.

What are the requirements for a rechargeable industrial battery?

Performance and Durability Requirements (Article 10) Article 10 of the regulation mandates that from 18 August 2024, rechargeable industrial batteries with a capacity exceeding 2 kWh, LMT batteries, and EV batteries must be accompanied by detailed technical documentation.

What is the new EU Battery regulation?

The new regulation ensures that EU batteries are safe, sustainable and competitive. This regulation supersedes the previous directive (2006/66/EC), which focused on 'end-of-life' battery procedures. The newly established regulation directly applies to all member states without requiring transposition into national law.

Driven by government support, decarbonisation efforts and technological advancements, electric vehicles - with their lithium-ion batteries - are becoming increasingly common. Electric ...

The EU 2006 Battery Directive is being revised with a new Batteries Regulation proposed in December 2020 for mandatory collection and recycling of automotive EV batteries.¹⁴ It calls ...

It sets out rules covering the entire life cycle of batteries. These include: waste collection targets for producers of portable batteries - 63% by the end of 2027 and 73% by the end of 2030; ...

Environmental protection requirements for new energy batteries

The first set of regulation requirements under the EU Battery Regulation 2023/1542 will come into effect on 18 August 2024. These include performance and durability requirements for industrial batteries, electric ...

In order to tackle human right abuses and ensure batteries are more ethically sourced, the new rules introduce a due diligence obligation on battery manufacturers. They will ...

Negotiators agreed on stronger requirements to make batteries more sustainable, performant and durable. According to the deal, a carbon footprint declaration and ...

In line with the circular economy objectives of the European Green Deal, the new Batteries Regulation (EU) 2023/1542, adopted in July 2023, covers the entire lifecycle of ...

The first set of regulation requirements under the EU Battery Regulation 2023/1542 will come into effect on 18 August 2024. These include performance and durability ...

The regulation imposes strict sustainability requirements on battery manufacturing and recycling to reduce the environmental impact of battery production. The ...

The regulation established requirements for sustainability, safety and labelling of batteries as well as requirements for end-of-life management. It sets targets for collection, ...

A new law to ensure that batteries are collected, reused and recycled in Europe is entering into force today. The new Batteries Regulation will ensure that, in the future, ...

Battery 2030+ is the "European large-scale research initiative for future battery technologies" with an approach focusing on the most critical steps that can enable the acceleration of the findings ...

Article 7, titled "Carbon footprint of EV batteries, rechargeable industrial batteries and LMT batteries", outlines one of the main requirements concerning the ...

This will be mandatory for electric vehicle batteries (EV), light means of transport batteries (LMT) and rechargeable industrial batteries with a capacity above 2kWh. In addition, ...

Setting sustainability requirements . OVERVIEW . Batteries are a crucial element the EU's transition to a climate-neutral economy. On 10 December 2020, the European Commission ...

Power batteries are the core of new energy vehicles, especially pure electric vehicles. Owing to the rapid development of the new energy vehicle industry in recent years, ...
